GLOBALISATION AND THE GROWTH OF THE CONTAINER

CONTAINER PORTS CHARACTERISTICS

- Resilient volumes, high cash generation, and limited operators.
- Light regulation – cost of container handling is less than 10% of total transport logistics.
- High entry barriers – capital expenditure heavy, strategic assets.

WHY DOES A MULTIPLIER EXIST?

- Distance between manufacturing and consumption location requires transshipment which leads to containers being handled more than once.
- Trade imbalance leads to empty repositioning.
- Low container penetration rates in emerging markets.

More than 90% of cargo is transported on Sea

World container traffic vs. World GDP

CONTAINERISATION PENETRATION RATES REMAIN LOW

ESG

SUSTAINABILITY FRAMEWORK

‘Our World’, focuses on the efforts DP World makes today to operate as a responsible business across seven priority areas

‘Our Future’, looks at the lasting legacy we create for industry and society. We focus on three areas for future generations: **women, education and water**

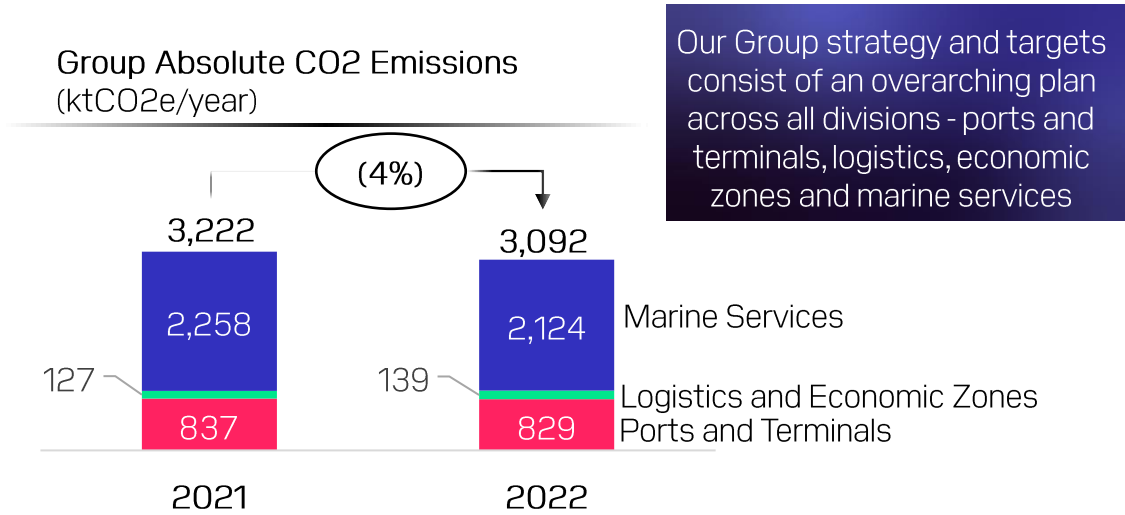

Our work is aligned with the **UN Sustainable Development Goals (SDGs)** so that DP World’s actions can contribute to a greater collective impact

OUR WORLD: CLIMATE CHANGE

We aspire to achieve carbon neutrality by 2040 and net zero carbon emissions by 2050, with an intermediate target of 28% reduction of carbon footprint by 2030

We are accounting for the following types of emissions

- SCOPE 1:** Direct emissions from owned and controlled sources (mainly fossil fuels)
- SCOPE 2:** Indirect emissions associated with purchase of electricity
- SCOPE 3:** All other indirect emissions occurring in the value chain will be addressed through the Group-wide Scope 3 emissions reduction strategy, focused on working with key suppliers of purchased goods and services

The absolute baseline was set in 2019 and is recalculated on a rolling basis due to acquisitions. The baseline is unaffected by organic growth (greenfield or brownfield)

We have set individual carbon intensity KPIs for Ports and Terminals, and we will be setting similar KPIs for Logistics, Economic Zones and Marine Services. We aim to have our methodology verified by GLEC

- We will be setting aspirational targets on Group, Regional and Operating Entity level, based on the assessed ability (both technical and regulatory) to achieve
- Operating Entities are expected to set and follow five-year decarbonisation plans, reviewed quarterly

OUR WORLD: CLIMATE CHANGE

Decarbonisation approach is grouped into five pillars

Equipment electrification and efficiency
Reduce diesel and marine fuel consumption

Process efficiency and digitalisation
Introduce innovative low-carbon technologies in operations portfolio and maximise efficiency in processes

Renewable energy supply
Procure electricity from renewable energy or carbon-neutral sources

Low carbon fuel supply
Procure low- or zero- carbon fuels to replace diesel and marine fuel

Carbon compensation
Compensate the remaining carbon that cannot be avoided or other carbon offsetting method

2022 notable activities

Launched **Climate Change Asset Resiliency** project to assess impact of climate

Established internal working group to identify and evaluate **hydrogen solutions**

Received two awards at the 2022 **Dubai Award for Sustainable Transport (DAST)**

Piloting **electric terminal tractors** at our Jebel Ali port
