

MY STORY

DANIEL GORDON

SOFTWARE DEVELOPMENT APPRENTICE

How did you get into the role?

I got into the role by applying through the government apprenticeship site.

What tasks do you do as an apprentice? Describe a typical day.

In a typical day, I would spend the majority of my time working on a program, with occasional help from colleagues when I get stuck. Each of these projects lasts a month or two, at the end of which I will create a write-up to submit to the apprenticeship agency.

What do you enjoy about your apprenticeship the most and what do you find

most challenging?

What I enjoy most about my apprenticeship is the opportunity to constantly put into practice what I am learning, allowing me to cement my understandings quickly. The most challenging part would be starting new projects that I have no prior knowledge of, since it can be hard to get going.

What are your future career plans?

I plan to become a full stack developer and continue to expand my skill set for years to come.

Any helpful advice for future apprentices?

Be sure to ask questions of the people around you, they'll have

years of valuable experience you can learn from.

I am able to put into practice what I am learning, allowing me to **cement** my understandings quickly. ”
