

INFORMATION SECURITY POLICY

DP World, a leader in International port terminal management operations, development logistics and related services is committed to providing a secure workplace at all times to ensure that our business activities are conducted in a manner that complies with international law and national regulations.

In order to guarantee our corporate values, daily operations, information that we have to safeguard as per the laws and regulations and the continuity of the strategic competitive edge of our corporation, our primary objectives include protecting the confidentiality of the knowledge assets of our corporation, ensuring that the contents are accurate and complete and when required, maintaining these as accessible by all of the relevant authorities.

To that end, an Information Security Management System that is administered efficiently in accordance with ISO 27001 standard has been established within our corporation.

As DP World Yarımca, as per our Information Security Management System;

- We identify the knowledge assets that fall under the pre-defined scope, analyze the security risks encountered by these assets and we establish an efficient information security risk management approach in order to lower the identified risks to an acceptable level or abolish them completely.
- We consider information security as a corporate responsibility. For this reason, we reserve the resources required for the management of information security risks and the efficient operation of security controls, we identify the roles, determine the powers, and appoint those in charge.
- In order to raise awareness to the roles and liabilities undertaken by employees with regard to the information security of third parties and stakeholders, we organize regular training activities.
- We develop and maintain the appropriate business sustainability plans and systems that would ensure the continuity of critical processes.
- We establish the necessary systems for the management of Information Security breaches and we adopt the suitable measures to prevent their recurrence.
- We determine security control targets, monitor the system on a regular basis and we improve it constantly through regular reviews.
- We consider compliance with all of the requirements and work ethic rules arising from all of the laws and agreements relevant to the information security of our corporation, customers, employees, and all of our business partners as the primary obligation of all of our executives and employees.

Compliance of all DP World Yarımca employees and suppliers with Information Security Management System policies, procedures and controls has been acknowledged as an unquestionable obligation.
